INTRODUCTION

Early in 1986 graduates of programs offered through the Saskatchewan Skills Extension Program (S.S.E.P.) in the 1984-85 academic year were surveyed. The S.S.E.P. programs are offered through Saskatchewan's Community College system and are based on programs in existence at the four technical institutes. Programs begun in 1984-85 were of various lengths, beginning and ending at many dates throughout the academic year. Selected S.S.E.P. programs were surveyed (2-40 week programs). This survey reflects the situation when each graduate responded to the survey, in the January-February 1986 time period.

Overall, sixty percent of graduates of these programs responded to the survey. Each graduate was mailed a questionnaire (see Appendix A). Several weeks after the first mailing a second mailing of the questionnaire was made to those graduates who had not yet responded. Those who did not respond and those who could not be located are considered non-respondents. The response rate is based on only those who responded divided by the total number of graduates.

Some S.S.E.P. programs have only a few graduates and so the results should be interpreted carefully because of the small number of respondents. The results do however indicate the situation for those who responded and may be representative of the overall population for the program.

This survey is based on the Technical-Vocational Institute Graduate Follow-Up Survey which has been conducted since 1974 to survey graduates of the technical institutes. A similar questionnaire was used so that results for regular institute programs can be compared with those for S.S.E.P. programs.

As with the Institute Graduate Follow-Up, the results of this survey are intended for use by career counsellors and students to obtain information about programs and the experiences of graduates, for the assistance of educators in planning and delivering programs, for the information of researchers and administrators in assessing the state of the labour market as it relates to educational and training programs, and as information to employers interested in program graduates, as well as a reference source for others in both government and the private sector.

It is hoped that the information provided in this first S.S.E.P. Survey Report will be both interesting and useful for its readers.

Should you require further information, please contact:

Joe Hindley, Research Officer
Labour Market Planning and Information Branch
Saskatchewan Advanced Education and Manpower

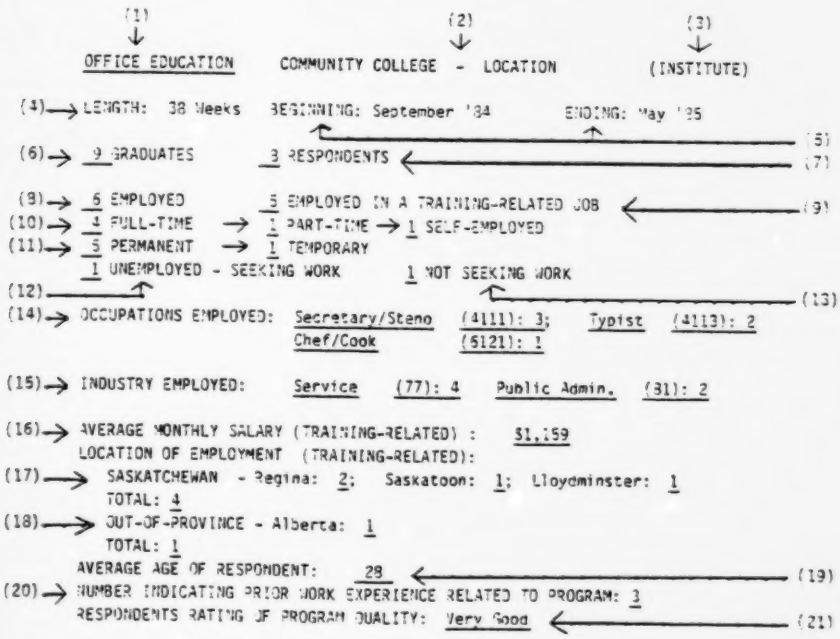
Telephone: 787-7384

Information on specific program offerings can be obtained from the appropriate Community College or Institute. Addresses and telephone numbers appear in Appendix B.

USERS' GUIDE

Program results are organized by Community College. First, a summary of results for all programs surveyed is given. At the beginning of each college section results for all programs at a Community College are given, followed by results for each S.S.E.P. program (included in this survey) offered at that college. If a program was offered several times during the academic year the results are combined for each class that was offered.

The results are reported as follows:



1. Name of program.

2. Name of Community College offering program, and locations.

3. Sponsoring institute.

4. Length of program.

5. Beginning and ending dates of program. Some programs may be offered more than once during the year.

6. Number of graduates to whom questionnaires were mailed.

7. Number of graduates who responded to the survey.

8. Number of respondents who were employed in some occupation at the time of the survey.

9. Number of employed respondents whose jobs were related to their training program in some way. Training related is based on: a) respondents answer to question "Do you think your present job is directly related to the education and training you received from your training program?" and b) respondents' description of job and main duties of job and c) comparison to answers given by other graduates of the program.

10. Number of respondents in full-time or part-time jobs or who are self-employed (this includes all employment, training-related or not).

11. Status of employment term (all employed).

12. Number who are unemployed and who are looking for a job. This does not include those unemployed but not seeking work.

13. Number who are unemployed, but not looking for a job at the time of the survey (not seeking work). This includes those who returned to school, are waiting for recall from layoff, have family responsibilities, are discouraged with looking, etc. These people are not considered to be in the labour force.

14. Occupations of respondents (training-related or not) described by name and C.C.D.O. four digit code. Canadian Classification and Dictionary of Occupations (C.C.D.O.) is an occupational classification system of titles and definitions with occupations represented by numerical code.

15. Industry category of respondent's employer. Titles and two digit codes shown are from the Standard Industrial Classification (S.I.C.) system.

16. Respondents were asked for their starting monthly salary before deductions. The average here is for training-related employment only and includes part-time.

17. Location of training-related employment within Saskatchewan and total number of respondents employed in training-related jobs in Saskatchewan.

18. Number of respondents employed in training-related jobs outside of Saskatchewan, by province or territory.

19. The average age of all respondents.

20. Respondents were asked if they have had any related work experience, prior to graduating from the program. Any respondent could answer this question.

21. All respondents were asked to rate the quality of the training program they completed. A one to five scale was used ranging from Excellent (#1) through Very Good (#2), Good (#3), and Poor (#4), to Very Poor (#5). The average response was determined and is indicated in words (e.g., average rating of "3" equals "Good").

"N/A": Not applicable or not available. Information may be deleted because of small number of respondents.

"D.N.I.": Did not indicate is shown where respondent did not provide information.

SUMMARY

572 graduates of S.S.E.P. programs were mailed survey questionnaires. 341 returned questionnaires with usable responses. The respondents are 60% of the graduate population. Thirty-nine questionnaires were returned which could not be used for reasons such as not being able to find a correct address for the graduate. The rest of the questionnaires (192) were not returned by the survey cut off date.

Respondents were from twelve community colleges and sixty-five programs. The programs originated from four technical institutes, various locations and at a variety of times in 1984-85.

237 respondents (69.5%) were male and 104 (30.5%) female. The average age of respondents to this survey was twenty-nine.

226 respondents were employed in some occupation. This is 66.3% of the respondents surveyed. Of the 226, 153 were employed in full-time jobs and 57 in part-time jobs. 14 were self-employed and 2 did not indicate. 44.9% of all respondents were employed in full-time occupations (153/341).

163 said they were employed on a permanent basis and 57 said their present job was temporary (6 did not indicate). 47.8% of all respondents were employed in a permanent position (163/341).

135 respondents were employed in a training-related occupation. This is 39.6 % of all respondents to the survey.

115 indicated they were unemployed at the time of the survey. Of these, 89 said they were looking for a full-time job and 25 said they were not seeking work at the present time. The 25 not looking for work can be considered to be "out of the labour force". So, the population of 341 less this 25 equals the "labour force" for this population (341-25 = 316). If 316 is the labour force then this number over the population (341) equals the "participation rate" of these respondents (316/341 = 92.7%). Also, the "employment rate" is those employed over the population or 226/341=66.3% The "unemployment rate" is the unemployed who are looking for work over the labour force or 89/316 = 28.2% for this population.

Respondents were asked if they had any prior work experience related to the program they took and 150 or 44.0% said yes.

Respondents were employed in various occupations, some of which are shown on the summary page following. The number of respondents employed in each industry category is also shown.

The locations in and out of province are shown for those employed and for those employed only in training-related occupations.

The average monthly salary before deductions for full-time and part-time jobs combined was $1,161.00 for training-related occupations and $1,231.00 for all occupations.

For all employed respondents, answers to the question "How did you get your present job?" and "Could you have obtained your present job if you had not taken your training program?" are shown on the second summary page.

For those in training-related jobs only, a rating of how well the training prepared them for their jobs is shown as well as the responses to the question "Do you need additional training?"

For those who were employed, but not in a training-related job, a series of choices was given as reasons for not being in such an occupation. These are shown, as well as indications of whether respondents would relocate, retrain or other.

A series of responses is indicated for reasons why those unemployed are not employed. Also a series of responses shows why those not seeking employment are not looking for a job.

Finally, of the five choices for rating the quality of a program (Excellent, Very Good, Good, Poor, Very Poor) the average overall rating was "Very Good".
